

Nilanjana Choudhury

Agentic Specialist

St. Louis, MO

hirehuman

Powered by LaunchCode

Agentic Specialist and software developer building AI-assisted development workflows and automation. Experienced with TypeScript/Node.js, MCP integrations, software testing, GitHub Actions, CI/CD, Docker, and governed agent workflows. Strongest in verification, evaluation design, workflow automation, and improving software reliability.

MEASURED AI IMPACT

- Reduced product listing preparation time from approximately 10 to 15 minutes down to 1 to 2 minutes per listing using an AI-powered product upload workflow.
- Developed a deterministic evaluation and regression framework for an agent workflow, passing 24 of 24 integrated harness checks with automated validation for workflow failures and policy compliance.
- Tested agent retrieval using a 0.65 similarity threshold to check whether agents received relevant project information.

SKILLS

AI & automation: Agentic AI development, agent orchestration, AI automation, evaluation design, prompt design, human-in-the-loop review, governance, Model Context Protocol (MCP), workflow automation

Engineering: TypeScript, Node.js, JavaScript, React, Python scripting, REST APIs, Spring Boot, Java, Git

Tools & DevOps: GitHub, GitHub Actions, CI/CD, Docker, VS Code, IntelliJ IDEA, Postman, Asana, OpenCode, Claude Code

Testing & Evaluation: Unit testing, software testing, Pytest, regression testing, deterministic checks, type checking

Data: SQL, PostgreSQL, relational database design

PROFESSIONAL EXPERIENCE

Agentic Specialist

Sep 2026 - Present

LaunchCode · Remote, Missouri

- Contribute to AI-assisted software development and automation projects focused on improving agent reliability and reducing manual workflow steps.
- Develop and validate TypeScript/Node.js MCP tooling for Asana and GitHub workflows, including ready-task discovery, task claiming, progress logging, pausing, and peer-edit submission.
- Build verification loops with unit tests, type checking, CI checks, and GitHub Actions; validated workflow behavior with passing automated test suites.
- Use Git/GitHub pull requests, code review workflows, Docker, and automated task-to-PR workflows in day-to-day engineering work.
- Collaborate with project leads on internal engineering projects and demo agentic workflows using AI development tooling.

PROJECT EXPERIENCE

Agentic Engineer Capstone · Art & Craft Marketplace Agentic Workflow Hire Human (LaunchCode) · Completed	2026
• Built a governed multi-agent workflow with 5 specialized roles (Orchestrator, Planner, Implementer, Reviewer, and Tester) with deterministic handoff validation across the development lifecycle. • Implemented persistent memory and MCP-based retrieval/storage to preserve project decisions and provide relevant context across agent workflows. • Developed a deterministic evaluation and regression framework achieving 24 of 24 integrated harness checks, with automated validation for workflow failures and policy compliance. • Integrated a governed CI/CD pipeline with 6 automated jobs covering change validation, policy enforcement, pipeline integrity, advisory review, and audit trails before integration.	
AI 101 Capstone · AI Product Upload Assistant for Art & Craft Marketplace Hire Human (LaunchCode) · Completed	2026
• Built an AI-powered product upload workflow using Google Forms, Google Sheets, Zapier, and AI by Zapier to generate product descriptions, categories, and searchable tags. • Added standardized formatting and human review before publishing AI-generated content to support accuracy, quality control, and responsible AI use.	
Art & Craft Marketplace · Full Stack LaunchCode Software Development Project	2026
• Built a React-based marketplace interface for artists and craft sellers with product listing and product-detail workflows. • Developed the full-stack application using React, Spring Boot, Java, REST APIs, and a relational database for product, cart, order, and review workflows. • Created the project ERD, wireframes, sprint plan, and Kanban workflow to organize development from requirements through implementation.	

EARLIER EXPERIENCE

Software Tester Ezy Tech Software Solutions Pvt Ltd · India	2010 - 2012
• Tested software functionality against requirements, documented defects, verified fixes, and supported developers in reproducing and resolving issues.	
System Administrator CMS Computers Limited · India · Clients: Cognizant Technology Solutions (CTS), PwC	2007 - 2009
• Provided system administration and technical support, troubleshooting hardware, software, operating system, user-access, configuration, and maintenance issues.	

EDUCATION

Bachelor of Technology (B.Tech), Information Technology Calcutta Institute of Engineering and Management (W.B.U.T)	2003 - 2007
--	-------------
